THE INNOVATIVE MATERIAL COMPOSITION FOR

MORE PROTECTION AND COMFORT — LIGHT VERSION

X-TREME® light offers heat protection that significantly exceeds the values set out in the European norm EN 469, whether in direct contact with flames or heat radiation. When developing X-TREME® light, the focus has been strongly on the weight. X-TREME® light combines excellent protection with significantly improved comfort, supported by the material's light weight.

Material composition

X-TREME® light is made up of three lave

outer layer, intermediate layer (heat comfort barrier) and membrane / flameliner (GORE-TEX Flameliner® G and GORE-TEX® moisture barrier with GORE® CROSSTECH® product technology).

ig. Fire Stretch, YA14.

WE ARE ONLY SATISFIED WITH

THE VERY BEST

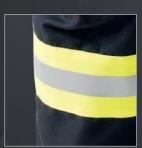

The insulation system in the shoulder area guarantees more safety through a permanent air cushion that rises from protectors in the inner lining and also stays upright when carrying respiratory protective equipment. The trapped air isolates this exposed area.

HPX SYSTEM

With the HPX System®, changing a defective zip is no longer expensive and complicated, but simple and affordable. Through the High Performance eXchange System, or HPX System, the lifespan of protective clothing is increased significantly. In addition, thanks to the striking design it is immediately visible whether or notate front part is fully closed. That makes it even safer.

EU Patent 07121066.

The TEXPORT® Triple Fabric® is a textile reflective stripe that is made from fabric and therefore is extremely breathable and more durable. The reflective, silverstripe material composition, patented by 3M*, adheres very well to the structure of the soft fabric. In addition, the TEXPORT® Triple Fabric® is abraded less severely through wear and washing.

EU Patent 08102991.0 *3M EU Patent 1974621

The TEXPORT® Ergopad® is a cushioned, ergonomically preformed knee pad that fits the knee in every place and avoids creating pressure marks. It is flameresistant and does not become saturated with water, in contrast to the aramid non-woven padding, so that the trousers dry much more quickly after washing.

The wicking barrier is permanently waterproof, breathable and wash-resistant. That means even after many uses and washes, the clothing's lining remains completely dry thanks to the GORE-TEX barrier, as no more moisture can enter through the seams.

FIRE STRETCH

Item description	Outer layer	Composition code	Composition: outer layer / HCB / flameliner	Colour variants	
Fire Stretch jacket Fire Stretch trousers	IB CTEX®	Y A 14	IB-TEX® Heat Comfort Barrier Flameliner 2L *	010 gold 203 dark blue	151 brilliant red

^{*} GORE-TEX moisture barrier with GORE® CROSSTECH® product technology

OPTIMUM IN FIT AND COMFOR

The Fire Stretch suit opens up new dimensions in fit and wear comfort in fire-fighting clothing. The Fire Stretch Series has special stretch-areas and combines these with an especially short jacket and cut of the trousers that allows for great freedom of movement. The series offers the best possible freedom of movement in every situation. Furthermore, the suit offers all the essentials one expects from high-quality, modern fire-fighting attire.
